

DIGIT

Self-assessment survey Results

Project

"New didactical tools for initial digital training of low-skilled adults to adapt to the labor market transitions (DIGIT)" is an Erasmus+ project which aims to develop an educational tool tailored to the needs of professionals to develop digital skills and competencies that will help them adapt to the labor market transitions that occurred due to the pandemic. Our goal is to help particularly vulnerable groups, such as low-skilled people, gain digital skills and knowledge to help them become more competitive in the labor market.

Survey

Through this survey, we explored the digital literacy in 4 the participating countries in order to create educational material based on their current knowledge and skills. In total we received 1000 responses from the 4 participating countries (Greece, Cyprus, Finland and North Macedonia).
